

PROFILE Independent digital-assets researcher who has built and maintained Guardian since 2024: a fixed 144-node intelligence framework covering market infrastructure, prudential regulation, tokenization, custody, collateral, private banking and macro-financial stress. Experienced in primary-source monitoring, strict deduplication, falsification testing, scenario analysis and concise decision dashboards.

CORE EXPERTISE

Institutional digital assets Tokenization, settlement, custody, collateral, stablecoins and cross-border infrastructure	Regulatory intelligence Basel/BCBS, MiCA, SEC, CFTC, OCC, FINMA, ECB, BIS and DTCC	Research governance Source hierarchy, evidence grading, global deduplication, audit trail and version control
Analytical methods Node mapping, Bayesian updating, scenarios, falsification clocks and pattern recognition	Executive communication Dashboards, institutional briefs, signal summaries and decision-oriented synthesis	Institutional engagement Exploratory dialogue with European private banks, custodians and specialists

RELEVANT EXPERIENCE

Independent Digital Assets Research Analyst & Guardian Framework Developer | 2024-present

Mallorca, Spain | Full-time independent research programme; typically ~10 hours/day

- Designed a fixed 144-node architecture spanning market infrastructure, regulation, banking, market structure, macro stress, institutional onboarding and model governance.
- Built a four-filter process with source tiering, one-signal/one-primary-node discipline, global deduplication, protected nodes and zero-drift controls.
- Created dashboards that separate verified facts, source quality, model inference, structural meaning and implementation gaps.
- Developed explicit falsification criteria, deadline-based review clocks and a continuous batch ledger with date/time, node assignment and evidence status.
- Used cross-model review workflows with Claude, GPT, Gemini and Grok to test consistency, identify drift and strengthen auditability.
- Tracked DTCC/FICC, Swift, BIS/central-bank initiatives, tokenized securities, custody, prime brokerage, collateral transformation and 24/7 market infrastructure.

Institutional Outreach & Case Development | 2025-present

- Managed exploratory dialogues with senior banking, product, custody and relationship-management professionals at Swiss and European institutions.
- Presented a custody, collateral and philanthropic-banking case; documented onboarding, qualified-investor, market-value and governance constraints.
- Converted feedback into testable research gates covering client classification, custody integration, LTV publication, capital treatment and execution readiness.
- Produced executive summaries, proof-of-assets materials, research papers and follow-up briefs for institutional audiences.

SELECTED WORK PRODUCT

Guardian Canonical Master: Version-controlled 144-node model with 15 analytical engines plus a meta-anchor.	Institutional Signal Dashboard: Concise regulatory, infrastructure, macro and banking updates with source quality.
Banktrack Ledger: Chronological record of contacts, onboarding constraints and decision thresholds.	Falsification & Review Calendar: Time-bound tests for regulation, collateral parameters, capital treatment and execution.

LANGUAGES & AVAILABILITY
